To the Hiring Committee,
Software Engineering Team

Re: Software Engineer I — Product-Driven Creator

Dear Hiring Team,

I am writing to express my strong interest in the Software Engineer I position. I am a builder who loves to ship real features, and I believe my background in full-stack development and AI-driven workflows aligns perfectly with your team's "Product-Driven" philosophy.

In my current role at BISUGEN, I am designing system architecture and backend workflows for an AI-powered e-commerce platform. I understand that engineering is about solving user problems, not just writing tickets. Whether I am integrating Google Cloud Platform to automate storage or building multilingual dashboards in Next.js, my goal is always to deliver a professional, high-quality product that reaches thousands of users[cite: 1, 18, 19].

During my time at Cuvette Tech, I focused on shipping production-ready code in Node.js and React, utilizing tools like Vercel and Render for deployment[cite: 14]. I am deeply curious about serverless architectures like AWS Lambda and am eager to grow my craft through mentorship and code reviews within your team.

I am self-motivated and take full ownership of my growth. Projects like my Ticket Management System and DevTinder demonstrate my ability to handle complex requirements like real-time communication and role-based access control[cite: 25, 27]. I am excited by the prospect of bringing this same "creator" mindset to your empowered product team.

Thank you for your time and consideration. I look forward to the possibility of discussing how my skills can contribute to your upcoming features.

Sincerely,

Rushabh Dipak Ingle
